

## **Father's Day Can Be Reality with Medical Help**

THURSDAY, 18 JUNE 2009

Father's Day is a day for fun with dad and special treats made just for him. But for couples struggling with infertility, Father's Day can be another painful reminder that their family is not yet a reality.

Just as many women face infertility obstacles, many men face the challenge of overcoming medical problems that impede their ability to become a father.

Of the more than 7.3 million cases of infertility in the United States, 30 percent are attributed to the male.

Dawn and Leslie Campbell of Dacula were very concerned when they did not become pregnant with their second child after months of trying to conceive. "I went in for testing, assuming there was some medical problem on my part," explained Dawn Campbell.

Because the couple had successfully conceived previously, doctors overlooked the possibility that a male factor could be involved. When the Campbells consulted with Georgia Reproductive Specialists, Dr. Susan Conway ordered complete testing for the couple. A low sperm count, an unlikely cause given the previous pregnancy, turned out to be the cause of infertility.

It is extremely important that a complete evaluation is performed in order to make the correct diagnosis," said Dr. Conway. "This enables the doctor to provide individualized medical care using the most effective techniques available."

One simple test in the doctor's office led to the diagnosis, enabling Dr. Conway to choose the right course of action. Happily, the Campbells achieved a successful pregnancy through minimally invasive intrauterine insemination.

"We were so relieved to have an answer and a solution from Dr. Conway," said Leslie Campbell. "This year we are celebrating Father's Day with both of our children."

### **About Georgia Reproductive Specialists**

Georgia Reproductive Specialists (GRS), founded in 2000, applies medical science's most advanced fertility technologies to provide the highest standards of patient-centered, reproductive healthcare. The staff at GRS is focused on providing individualized, innovative solutions for reproductive challenges and infertility, specializing in in vitro fertilization, intracytoplasmic sperm injection and other assisted reproductive technologies. GRS has offices in Atlanta, Alpharetta and Decatur. For information, call 404-843-BABY or visit <http://www.ivf.com/>.
